

Interactive Information Access Terminal

Internet appliances are delivering vast streams of information to all facets of society, providing new opportunities in the retail, commercial and service industries. MASS is at the forefront of this movement by providing information management and consumer interfacing solutions. MASS' patented dual LCD delivery system allows processing and display of retail, commercial or industrial information on easy to operate touchscreen terminals, thus enabling fast access and display of information, data and news. The high resolution TFT display is designed to provide the maximum amount of viewing real estate with complete configurability and functionality.

Our dual LCD Kiosk, the 'Interactive Information Access Terminal' is available for exhibit applications. Due to its small profile, customers can easily locate this kiosk in many areas where floor space is restricted to increase the amount of information delivered to their audience.

MASS' Interactive Information Access Terminals have been developed as indispensable tools for retailers and many service providers. The company has built its reputation on an ability to capture the look and feel of physical commercial environments in a compelling multimedia content delivery system.
